- Integrating APIs from backend
- Implementing UI designs into mobile applications
- Uploading applications to Google Play Store

# Portofolio

## BENGKEL AKTIF

A web-based workshop search application created using the PHP programming language, Google Maps API and Bootstrap templates. This application is inspired by an incident that I experienced while on my way home from Sidrap Regency to Makassar City where my friend's motorbike was damaged and we did not find the nearest workshop that was open because we didn't know the places in that location.
